2 comments You can use G-Shift to give any button on the G600 game mouse alternative function and then gain access to this feature by holding the G-Shift button. By assigning a button like the G-Shift Feature Setting to the G-Shift Appointment button as the default G-Shift, the G-Shift is assigned to the right button at the top of the mouse, but you can assign the G-Shift function to any button. To assign another button like G-Shift: Open Logitech gaming software: Start the zgt; Logitech game software 8.x Tap the button icon settings at the bottom of the window. Click the button you want to assign to G-Shift and then select Edit. In the left glass, click the mouse function. In the right glass, under the function of the button, select G-Shift. Click OK. Setting up the functionality of the G-Shift Once you have assigned at least one button as G-Shift, you can customize alternative features for mouse buttons. To assign the G-Shift team: Open Logitech's gaming software: Start the logitech program at the bottom of the window. NOTE: G-Shift can be configured either in on-board Memory mode or in automatic game detection mode. The screen will now change to show a view of the button configuration. Look for a normal/G-Shift switch on the left. NOTE: If you don't see the Normal/G-Shift switch, make sure you have at least one button installed as G-Shift. Click G-Shift. The switch must move, and each button label will display a combination of keys with a green background. Now you can install an alternative feature for any button using the key combination shown. The alternative function is activated only when you press the G-Shift and press the right button. NOTE: G-Shift is an alternative state. You can't install G-Shift as the default button destination. For more information on how to help you assign the game mouse buttons, visit 360023248894. We automatically discovered your operating system. Link Each module in gShift University can be taken as a separate course, or as part of a larger certificate program. At the end of each module, a multi-choice test will be conducted to demonstrate the level of understanding of materials and lectures. To be certified in each of the modules under this specific program estimate of 80% or more. A gShift University certificate, including a logo to be added to your website, will be awarded to each participant who completes all mandatory modules for each type of certificate. The course materials will include manuals, work books, books, research and, where applicable, customer playbooks. In some cases, after a course of consulting can be provided at the level of a group of clients for institutions. The gShift Certificates that can be earned are: We put everything you need to get started with the G600 MMO Gaming Mouse right here. If you still have questions view the topics on the left. Please watch The Downloads below Select OS (List version) Select OS (versionList) Select OS (list version) Was this article useful? 0 out of 0 found it useful I like this! dislike this! dislike it © 1996-2014, Amazon.com, Inc. or its affiliates Published by David Yee Fri, May 23, 2014 - 9:00 AM Logitech gaming software G502 Proteus Core does not come with a software drive and instead of Logitech Gaming software should be downloaded from the Logitech support website. The software is required to change the profiles of the onboard mouse, including the team macro and sensitivity settings. Logitech Gaming Software is also used for other Logitech gaming products and settings for each device can be accessed from the software control panel. Logitech SetPoint, which is used for other non-gaming Logitech products, does not recognize Logitech's gaming products. The main menu has a large graphic G502 mouse. Navigating the menu is located at the bottom and on a large mouse chart. Clicking the glowing mouse buttons on the graph will go to the macro setting. On the right, clicking the pointer icon with the transmission will go to the pointer settings. Also on the right and above the pointer setting is a switch that switches between on-board profile settings and locally stored settings. If you change the settings on board, any of the three profiles can be disabled from above. This submenu combines commands of mouse buttons and pointer settings. If one of the mouse buttons is assigned to the G-Shift team, G-Shift jobs will be available. G-Shift acts as a keyboard modifier for the mouse. When the designated G-Shift button is held, other mouse buttons will have their own alternate shifted commands. The available mouse commands in board mode are much more limited than the commands available in local game detection mode. Switching to automatic game detection mode activates the settings of locally stored G502 mouse profiles. In this mode, individual games can be configured with their own button tasks. New profiles can be added manually or from an extensive list of games with available commands. Compared to on-board profiles, locally stored profiles are capable of performing a wider range of mouse button commands. Pointer settings can be global or, by checking the checkbox for profile settings, can be assigned to each game profile. The G502 Proteus Core is the first Logitech mouse to adapt the surface. Three superficial presets included, which are by default, the G240 Fabric Gaming Mouse Pad, and the G440 Hard Mouse Gaming Pad. New superficial profiles may be and then tuned. To adjust the mouse sensor to a new surface, click the melody button. Then follow the screen instructions that instruct you to hold the left mouse button and move the mouse continuously on the surface. The speedometer screen will indicate if the mouse is moving too fast or too slow to calibrate the surface. Once completed, the mouse button can be released and the window may be out. Here we see that the new surface has been configured. Clicking the gear icon in the bottom right corner will result in additional settings. The additional settings typical of the G502 are changing the blue lighting mode of LED lighting, snapping the corner and checking for new solid updates. Additional profile settings to determine the back up profiles and create a hotkey for the bike riding profile for profiles that belong to the same game.
